

# **Transportation . .**

***. . . The key to unlocking the  
final frontier.***

## ***The Last Frontiers***

---

- ◆ For this future generations in this new millennium, only two new frontiers remain to be explored and developed by humans:
  - Under the oceans, seas and lakes (about 80 percent of the Earth)
  - The vast reaches of near and outer space
  
- ◆ We are slowly running out of resources while this planet's population is exploding.
  - Rapidly/exponentially approaching 7 billion people while we started the 20th century at barely 1 billion
  - Running out of food, water, sources of fossil energy, and maybe even the very air we must breath as the human race continues to pollute everything it touches
  
- ◆ We must establish new, highly reliable and low-cost ways to colonize under the seas and to get people permanently off "Spaceship Planet Earth"!!

## ***The Last Frontiers (cont'd)***

---

- ◆ We are in similar position to the European continent in the 15th century when the people were dying from starvation, new terrible diseases (e.g., Bubonic Plague) and general overcrowding.
- ◆ We must establish new colonies permanently in space because it is vital to the ultimate survival of the human race.
- ◆ Reliable and affordable space transportation for routine human travel into space and the planets is once again the key to developing this last great frontier.
- ◆ This talk will now focus on what NASA is now doing to initiate the process in earnest.
- ◆ We may well be at another historical moment in NASA's evolution with an opportunity to help humans in fundamental ways.
  - Similar to the Apollo program 40 years ago.

## ***The Last Frontiers (cont'd)***

---

- ◆ Space transportation is the key, and once again will only meet the needs with new generations of competent, talented, and innovated mechanical engineers.
- ◆ Now let us look at how we may begin this process.

*The New World*

*The American West*

*Transcontinental Travel*

<ul style="list-style-type: none"> <li>Low Cost</li> <li>Upperstage</li> <li>Magnum</li> <li>EELV</li> </ul>	<ul style="list-style-type: none"> <li>Low Cost</li> <li>Upperstage</li> <li>Reusable First Stage</li> <li>New Orbital Stage</li> <li>Magnum</li> <li>EELV</li> </ul>	<ul style="list-style-type: none"> <li>Crew Transfer Vehicle</li> <li>Cargo Transfer Vehicle</li> <li>Crew/Cargo Transfer Vehicle</li> <li>ATV</li> <li>Magnum</li> <li>EELV (human rated)</li> </ul>	<ul style="list-style-type: none"> <li>Low Cost</li> <li>Upperstage</li> <li>New TSTO</li> <li>Crew Transfer Vehicle</li> <li>Magnum</li> <li>EELV (human rated)</li> </ul>	<ul style="list-style-type: none"> <li>Low Cost</li> <li>Upperstage</li> <li>New SSTO</li> <li>Crew Transfer Vehicle</li> <li>Magnum</li> <li>EELV (human rated)</li> </ul>

# Shuttle Safety Upgrades

## *Major Upgrades Under Evaluation*

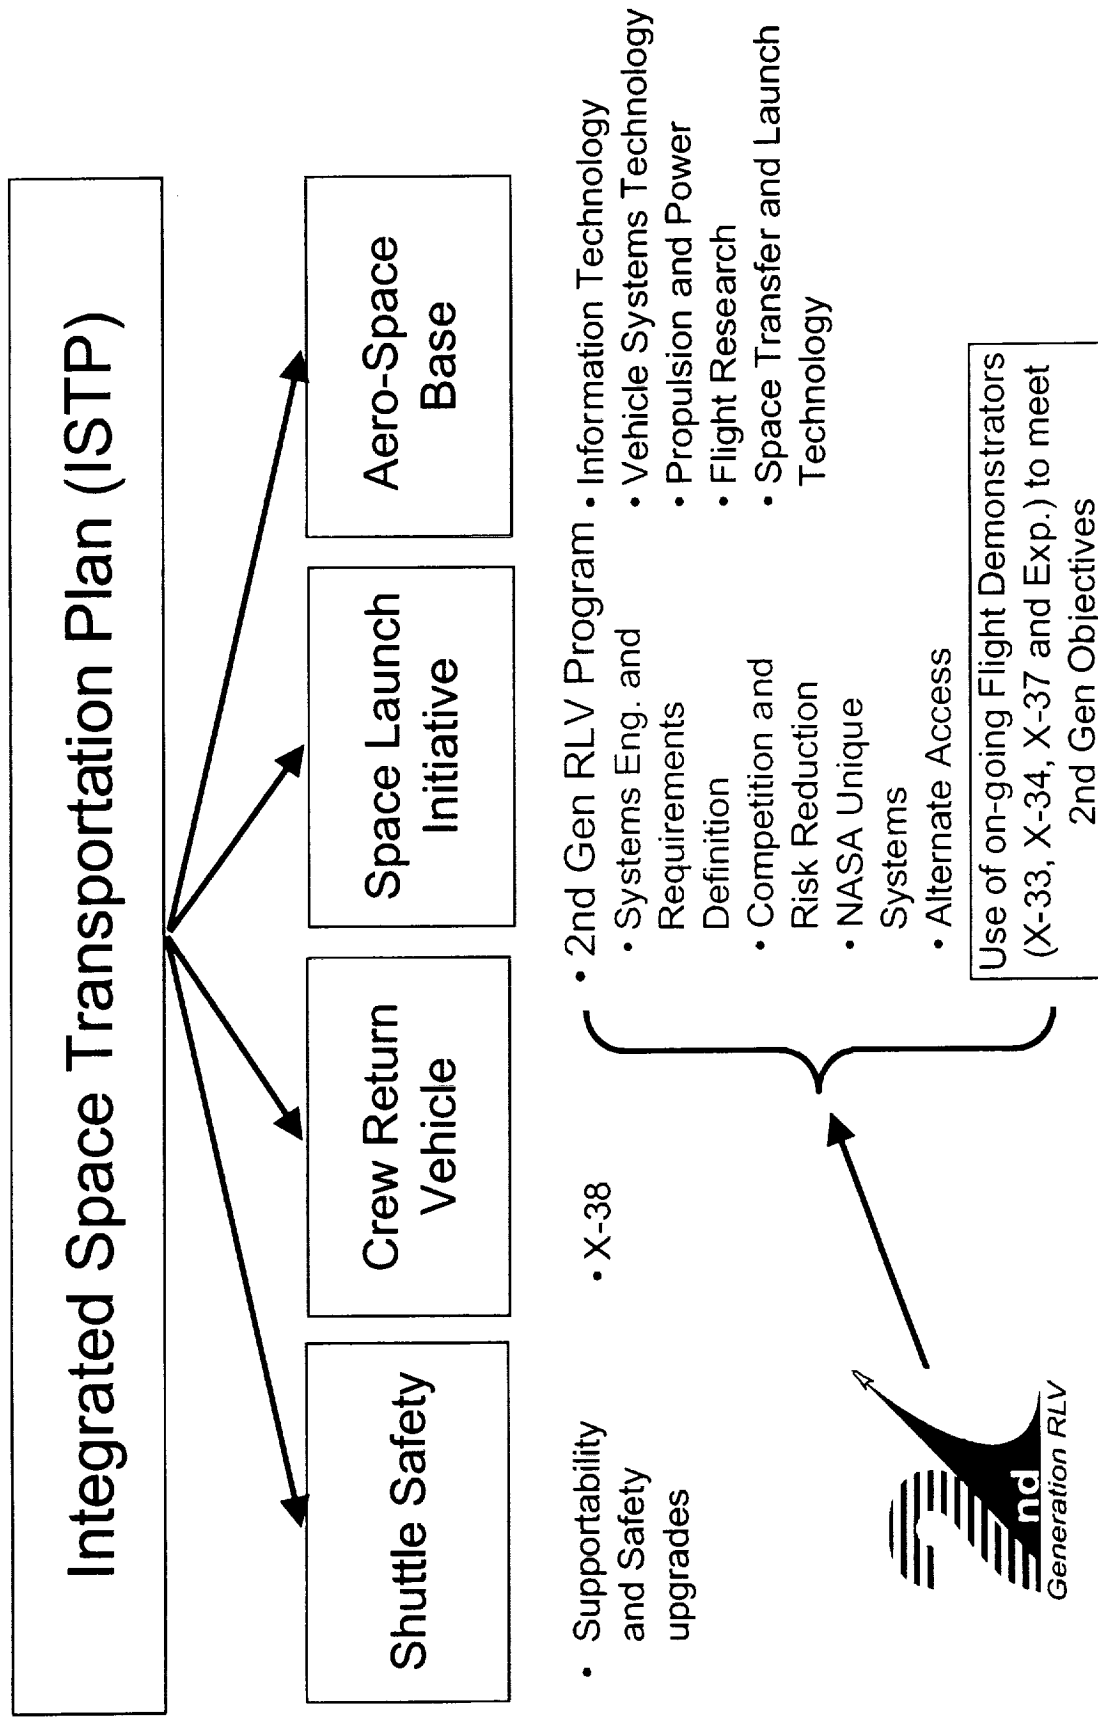

**Five Segment Booster (FSB)**

**Reusable First Stage (RFS) Booster**

# Space Transportation Definitions

## ***The Challenge***

- ◆ ***Safer, more Affordable, more Reliable Space Transportation is needed.***
  - The U.S. is losing its market share of space launch to overseas competition (improving 40 year old U.S. technology)
  - NASA's space transportation expenditures consume nearly 25% of NASA's annual budget.
  - Systems have typically focused on EITHER performance or simplicity
- ◆ ***NASA's role: To lead the development and demonstration of the requisite technologies to meet the above goals***

## ***Risk Barrier***

---

- ◆ The way to safe, reliable, affordable access to space is blocked by technical and business risk
- ◆ NASA and the Administration have developed an integrated approach to removing the risk barrier for a 2nd generation system:

### **Space Launch Initiative**
